

Product Description:

Trinic Plasticizer

A proprietary blend of a powdered plasticizer with dispersing and wetting agents for the production of ultra high performance wet-cast and GFRC concrete

Benefits:

- Faster blending, easier wetting out of cementitious paste and color components.
- Increases compressive and flexural strength as well as acid and stain resistance of concrete.
- Eliminates overnight shipping costs in winter, will not mold or spoil.
- Improve color dispersion, intensity, and stability resulting in better color “pop”.
- Works well with from scratch mix design, also turns bag mixes into high performance concrete.

Dosage Recommendations:

- Start with .5% of the total cementitious weight.
- Up to 1% of the total cementitious weight to make SCC wet-cast or SCC GFRC.
- Do not dose over 1% of the total cementitious weight when using in conjunction with System 1 WetCast or GFRC Admix.
